

RESULTS OF REFORMS IN THE FIELD OF WALNUT FARMING IN UZBEKISTAN

Introduction. The best practices of foreign countries, the implementation of modern intensive and innovative technologies in the field of walnut growing, which is currently considered one of the most important areas of horticulture, are of great importance in the continual increase of the productivity of walnuts. Another important point is that the establishment of walnut fields based on intensive technologies is being considered as one of the important strategic directions of modern horticulture to improve the food supply of the population.
